

INTRODUCTION

Preamble:

Each and every individual might not be capable of having his /her own car or any sort of vehicle to displace himself according to his comforts. Although public transport is the best suggested way to move around it may not hold true for every situation, there may be some situations where a private owned vehicle suits the best and in today's busy world many are afraid to waste their time waiting for the public transports to arrive. And of course, no one would want to have trip around by just using public transports all the time, even a small 2-wheeler of your own might create a huge difference.

Thus, the main motive of the project stands very simple that is, to provide a very true feeling of a owned vehicle to the customer on the basis of the time they would love to have it.

Objective of the project:

- To provide best possible owned vehicle feeling for the customer.
- To set up a transparent pricing system.
- Customer friendly.

Features of the project:

- The project provides a platform for the registered users to access the available cars that are well maintained for the rental purposes and accordingly select the one's they like to drive.
- Users get number of cars available in different brands, categories and models. The project is very much user friendly and assures to give a complete owned-car experience with minimum number of formalities that are checked at the time of handing over the car.
- **Each rental may cost Rs.500/- per vehicle for each hour irrespective of the type and brand of the vehicle they book. Additional running charges vary depending upon the brand model they opt for.**
